Vilomix invests in new premix factory in Poland

Vilomix Group is making a significant strategic investment in a new factory for the production of premix and mineral feed in Siedlec, Poland.

The investment is being made through the subsidiary Blattin Polska and is a strategic step in the Vilomix Group's continued international growth. Blattin Polska currently has two compound feed factories in Poland.

The new factory is expected to be fully operational by the end of 2026 and

will have a capacity of approximately 35-40,000 tonnes per year. The increased production capacity will ensure shorter delivery times, reduced transport costs and more flexible delivery options for Polish farmers.

In addition, the factory will serve as a hub for neighbouring markets where Vilomix is already active, further strengthening regional supply chains.

"The investment is an important milestone in the Vilomix Group's international growth strategy. Poland is one of our key strategic markets in our FEED FORWARD strategy towards 2028, and this step strengthens our position in one of Europe's most dynamic agricultural regions. It demonstrates our long-term commitment to supplying high-quality premix and mineral feed to farmers across borders," says Peter Iversen, CEO of the Vilomix Group.

At the local level, Blattin Polska sees great opportunities for customers:

"With our own premix and mineral feed production in Poland, we can serve farmers more efficiently with faster deliveries and solutions tailored to local needs. The investment is a strong signal of confidence in our team and the Polish market, and it will provide our customers with significant benefits in terms of flexibility and competitiveness," say Blattin Polska's management team, Zbigniew Pustula, Andrzej Mirek and Piotr Pstragowski.

With the new factory, Blattin Polska will expand its presence in all major livestock segments and increase its market share in premix and mineral feed. The factory will be equipped with modern production technology and flexible packaging options that ensure high quality and efficiency.

The investment also contributes to the Vilomix Group's global footprint. With factories in Denmark, Sweden, Finland, Norway, Latvia, Poland, Spain, Paraguay and Brazil, the group will operate a total of 12 factories worldwide, underlining its role as an international leader in the production of premix and mineral feed.
